

DESCRIPTION

About Mylar- Mylar is an extraordinarily strong polyester film that was developed in the early 1950s. During the 1960s cellophane gave way steadily to Mylar with its superior strength, heat resistance, and excellent insulating properties. The unique qualities of Mylar allow lighting designers to introduce innovative new lines of light fixtures where light diffuses equally with warm glow.

The Hyacinth chandelier takes a cascade of Mylar flowers that are interwoven with metal and electrical wires to create a radiant glowing bouquet. Size and number of bulbs fully customizable. Also available as a wall sconce.
